Why we collected survey information
The Makin’ Groceries partnership is working to determine if new supermarkets in neighborhoods make it easier for people to get the healthy foods they want and need.

Over the past year, we collected 900 household surveys asking people in two New Orleans neighborhoods about their grocery shopping. By talking to people in two different neighborhoods now and in the future, we hope to show that having more grocery shopping choices in a neighborhood will give residents better access to healthier foods, such as fresh fruits and vegetables.

Future plans
We hope to come back to both neighborhoods in the future to talk to residents again and see if anything has changed. Thank you for helping the Makin’ Groceries team!

What We Learned

What did we find from our surveys?

We understand that many of you may be interested in finding out what we learned from asking you questions over the past year. So, here are some results:

- **Average distance to closest supermarket:** 1 Mile
- **However, the average distance traveled to buy groceries was farther:** 2.75 Miles
- **Average number of shopping trips a month:** 9 Trips
- **Average daily servings of snacks:** 3 Servings
- **Average daily serving of produce**: 2.5 Servings

*The American Heart Association recommends at least 7 servings of fruit and vegetables daily.*

*We look forward to seeing you again in the future!*

**Where Bunny Friend & Broad St. residents shop...**

**People shop at more than one store. So total percentages add up to more than 100%**

The Prevention Research Center at Tulane University is a member of the Prevention Research Centers Program, supported by the Centers for Disease Control and Prevention, under cooperative agreement number U48-DP-001948. The findings and conclusions in this report are those of the Makin’ Groceries Partnership and do not necessarily represent the official position of the Centers for Disease Control and Prevention.
